EDUCATION

Master of Technology in Data Science and Analytics MIT WPU, Pune (CGPA – 7.56)	Current
Bachelor of Technology in Computer Science Engineering University of Mumbai (CGPA - 8.42)	2020 - 2024

TECHNICAL SKILLS

Programming Languages: Python, Java
Frameworks & Tools: React.js, Node.js, Express.js, MySQL, OpenCV, GitHub, REST APIs, Socket.IO
Technologies: Machine Learning, RAG, LLMs, Model Deployment, Generative AI, ETL Pipelines, Deep Learning

EXPERIENCE

Celebal Technologies Data Science Intern	June 2026 – August 2026
- Built Machine Learning pipelines using Python, Pandas, NumPy, and Scikit-learn, including EDA, preprocessing, feature engineering, and model evaluation. - Implemented a memory-augmented chatbot using RAG, LLMs, vector embeddings, and Agentic AI for context-aware conversational assistance.	
MIT WPU Teaching Assistant	Feb 2026 – May 2026
Conducted Python for Data Science lab sessions, mentored students, and evaluated practical assignments using Python, NumPy, Pandas, and basic machine learning concepts.	
IDMS Infotech Web Developer Intern	Jul 2024 – Jan 2025
- Trained in Full-Stack Web Development and developed responsive React.js UI components and integrated REST APIs. - Worked with authentication, protected routes, MVC architecture, debugging, and feature enhancements for internal web applications.	

PROJECT

Dev-Tinder
- Built a Tinder-inspired developer networking platform using a microservices architecture with a responsive React frontend and scalable Node.js/Express backend powered by MySQL. - Implemented profile-based matchmaking, real-time chat (Socket.io), Razorpay payment integration for premium membership, and automated daily email notifications using Cron jobs.
AI GitHub Profile Analyzer
- Built a web app using React and Node.js that fetches a developer's GitHub data (repositories, commits, languages used) through the GitHub REST API. - Sent the fetched data to Gemini AI to analyze and generate a developer report covering their strongest skills, contribution consistency, and a developer rating.
Voting System Using Facial Recognition
- Developed a face recognition–based voting system for secure voter authentication and fraud prevention. - Built a React-based frontend with a Node.js/Express REST API backend to manage voter registration and vote casting. - Implemented Haar Cascade algorithm for real-time face detection and LBPH for face recognition using OpenCV.

CERTIFICATIONS

- Data Analytics Job Simulation (Deloitte)
- Web Development Bootcamp (Udemy)
- AWS Cloud Practitioner Essentials (Coursera)
